Founded 2018

As more and more data are being made available, there is a lack of understanding how to use the data effectively to make better decisions. Our teams need to think critically rather than simply react or ignore. The current tools available for Clinical Trial Professionals do not yield consistent and effective results.

Is re-training always the answer when issues are unearthed? Want to know how to dig down to the cause and act on it?

DIGR-ACT® is a solution for those looking to improve their critical thinking skills in relation to clinical trials. It helps learners manage issues and risks that matter, to dig through and map information to root cause, then to come to valid conclusions on how to act effectively.

DIGR-ACT® is a solution developed by industry experts that addresses this gap of critical thinking skills needed specifically for clinical trials.

DIGR-ACT® is more than a tool, it is a process for you to integrate into clinical operations to better support clinical quality system. Better handling and prevention of issues means better project outcomes and less tears!

DIGR-ACT® is an exciting composite of well-tested approaches from other industries synthesized specifically for the Clinical Trial Professional.

DIGR-ACT®: Issues Prevention and Management Without Tears
